

Information leakage: Shredding services. What happens if data protection is left behind?

Do you have to regularly destroy large amounts of paper documents? It sounds easy and convenient to have someone else handle both the work and the responsibility, however, this does not bring 100% security.

The risks:

- You do not see the result.
- You do not choose the level of security (shred size).
- Your documents are often temporarily stored before they are shredded.
- Shredding services cannot release you from liability in cases of misuse.

THE SOLUTION:

Better do the shredding in-house.

No strangers entering your building, no large collecting points, no long transportation routes, no hard-to-monitor intermediate stops: By shredding your confidential documents in-house, these risks are eliminated. High quality and high capacity shredders work for many years – the investment pays off quickly.

DESTROYIT®

HIGH CAPACITY SHREDDERS

It does not matter how much paper needs to be shredded: You should always remain in control of your data and never surrender this responsibility to external disposal companies. DESTROYIT provides optimum solutions for in-house bulk shredding, too.
